

1. Quick Access (no registration)
2. Registered Quick Access (registration required allow temp tables)
3. Bach Access (registration required allow temp tables).

The Job control described below for this could also be used for Condor Monitoring.

		If this is null then the user may submit queries and that's it.

Servers Table Schema

We need a server config table so we can find an appropriate database to run a query on.
This would allow us to configure a cluster of servers and run queues on
Co

CAS Access should be modified to do simple load balancing for the QuickAccess queries. This can be done by having min the loaof eachng m

The Ferris Wheel For All Sky Queries

This is a longer term goal.

We have spoken for some time about batching queries together to run in a sort of Ferris

Execution

Some execution framework will be required although it should not be difficult.. All
